SYSTEM UPDATE

NOVEMBER 2015

November System Update

- 1 Client Immunization Record Report—New Version
- 1 Setting Preferred Language in Panorama
- 2 Change in name for inf-trivalent vaccine

Client Immunization Record Report — New Version

The Client Immunization Record report is now available in both French and English. The report defaults to print in English however, it can also be printed in French. When a client requests a copy of their client immunization record, ask them if they prefer the record in English or in French.

When generating the Client Immunization Record report, an extra step is now required. After you click the **Profile Report** button, a new Reports Filters page will show.

The Language field will default to 'Client's preferred language'. Choose French or English as requested by the client and click **Generate Report**. QRC 5.3 has been modified to reflect these changes and is now available at <http://www.panoramamanitoba.ca/res-reports.html>

Setting Preferred Language in Panorama

In addition to the Client Immunization Record, additional select client communiques regarding immunizations will be available in French. If the client prefers these communiques to be provided in French, the preferred language should be changed from English to French. See new QRC 1.14 at <http://www.panoramamanitoba.ca/res-mcr.html> for instructions on how to make this change.

If you make a change to the preferred language, it is recommended that you document this action in a Note.

Change in name for inf-trivalent vaccine

Previous influenza immunizations that have been documented in MIMS or Panorama by choosing the Inf-Trivalent vaccine have been modified to a new name: **Inf-Intramuscular**. This new name can now be seen in Panorama. In eChart there is no change to the name; it remains as **Influenza vaccine**.

In Panorama, Inf-Trivalent is still available as an option in the vaccine drop down list, however when documenting an intramuscular influenza immunization in Panorama in the future, always choose **Inf-Intramuscular** as the vaccine, **not** Inf-Trivalent as the lot numbers are linked to **Inf-Intramuscular**.
