

Panorama

SYSTEM UPDATE

MARCH 2016

March 2016

- CPS Interface (Physician Billing)
- Calling MDA when receiving vaccine order
- Rabies Vaccine—pre and post exposure
- Documenting single immunizations given in more than one anatomical site
- Documenting Exemptions
- Correcting DPIN entries

Claims Process System (CPS) Interface (Physician Billing)

If Physicians are asking for changes to be made in immunization details in Panorama within 6 months of the immunization date, advise them that they should resubmit billing to make the correction themselves. If a Panorama user has made any changes to the original immunization details, corrections can no longer be made through billing.

For corrections to physician entries for immunizations given more than 6 months prior to the administration date, physicians should be requested to submit corrections in writing to the public health office.

Do I still need to call the vaccine warehouse when we receive vaccine that has been ordered using Panorama?

Answer: It depends

No— if you are a WHRA Public Health site

No— if you are a rural or First Nations Panorama site and receive your vaccine into Panorama within the same working day you unpack the vaccine and the data logger is green.

Yes—if the data logger is red

Yes—If you **do not** receive the vaccine into Panorama within the working day it was delivered.

How do I contact the vaccine warehouse (MDA)?

phone 204-948-1333 or toll free number 855-683-3306 OR

email: vacmda@gov.mb.ca.

Details to report to MDA:

- Req. ID,
- contact name,
- facility name,
- the time they opened the package,
- log tag flashing green or red

Rabies Vaccine—Pre-Exposure vs Post-Exposure

Ordering Rabies Vaccine:

Rabies vaccine is only available to order as “Post Exposure”

If you are ordering for authorized “Pre-Exposure” immunization, order “Post Exposure” and enter details in the Comment section of the requisition.

Level 1 - Category:	Vaccines
Level 2 - Product Group:	Rabies - Post-exposure
Level 3 - Generic Product Strength:	
Level 4 - Generic Product Presentation:	
Level 5 - Generic Product Package Size:	
Level 6 - Trade Product:	

Documentation of administered Rabies Vaccine,

there is a choice of :

- Rabies— Post-Exposure OR
- Rabies—Pre-Exposure

This provides the ability to identify if the rabies vaccine was given for pre-exposure or post-exposure immunization.

Documentation when rabies vaccine has been ordered and received by a non-Panorama user:

Example: An emergency order by an MOH that is delivered to a hospital so Rabies Immune Globin and first dose of Rabies Vaccine can be given by hospital staff. The remainder of the rabies vaccine is later delivered to the public health office for administration by public health nurses.

There are 2 options:

- Adjust rabies vaccine into the holding point Inventory as per QRC 4.0. The nurse administering will then be able to document Provider Recorded

OR

- The vaccine is not adjusted into the Inventory and the nurse administering the vaccine can document by using Add Historical Detail as per QRC 2.5

For more information, visit:

www.panoramamanitoba.ca

Documenting single immunizations given in more than 1 anatomical site.

For any single immunization given in more than 1 anatomical site on the same day (e.g. Hepatitis B renal dose, Rabies Immunoglobulin) please record them as one immunization with multiple sites.

Example: Renal dose of Hepatitis B is 40 mcg = 2.0 ml Recombivax and is given 1 ml in each deltoid.

Change the dose to 2.0 ml

Select "Other" as the Site

Dosage: 2.0 Dosage UOM: mL

* Site: Other - specify * Route: Intramuscular

Reason for Immunization: --select--

Revised Dose Number:

Revised Dose Reason: --select--

Revised Dose Comments:

(4000 characters) Add

Date	Comments	Recorded By
------	----------	-------------

Information Sheet Given Date: 2016 03 16

yyyy mm dd

Enter the site details in the Comments section

Comments:

1.0 ml L deltoid
1.0 ml R deltoid

(3966 characters) Add

Reminder to Document Exemptions

If you are aware of an exemption please document it as a Special Consideration (QRC 1.8) so that the fore-caster is correct.

Valid reason for Exemptions are:

- **Immunity - Previous Disease** e.g. varicella
- **Immunity - Confirmed by Lab Result** e.g. hepatitis B

* Type of Special Consideration: Exemption

* Reason for Special Consideration: --select--

* Immunizing Agent: --S

Agent

Immunity - Confirmed by Lab Result

Immunity - Previous Disease

Immunity - Previously Immunized

Do not use "Previously Immunized".
Document immunizations in client
Immunization profile.

Important: Refusal is not a valid reason for an Exemption.

Correcting Drug Program Information Network (DPIN) Entries

- If you are a clerk documenting vaccines administered at a medical clinic and there is a DPIN entry for the date the vaccine was dispensed by the pharmacist:
 - Click update. Change the date to the date administered. Change the SDL to the Medical Clinic name. Change the Organization to Medical Clinic< RHA>. Add Comment: "Updated DPIN entry as per _____ Medical Clinic immunization data entry form". Provider name is optional.
 - If the name of the clinic cannot be found in the SDL listing, the pharmacy name should be cleared. SDL can be left blank and the Organization selected would be "Manitoba Physicians"
- If you are a nurse administering a vaccine that was dispensed by a pharmacist and there is a DPIN entry for that vaccine. Delete the DPIN entry and document Add Historical Details.

QRC 1.11 has been revised to include this advice about correcting DPIN entries. (See also [March DPIN System Update](#))
