

OCTOBER 2017

October System Update

- 1 Funding and Data Entry
- 2 Train the Trainer refresher
- 3 Inventory Updates
- 4 New Name for Panorama
- 5 Panorama User Group
- 6 Investigations documentation in Panorama
- 7 Communications Log
- 8 Client upload
- 9 New Login

Funding and data entry

Just a reminder that funding in Panorama is related to the Organization. For some immunizations it is also related to the reason. Funding for administered immunizations must have an organization type of:

- a. Public Health
- b. Home Care
- c. Occupational Health (Regional Health Authority only, non RHA Occupational Health orgs will not be considered for funding)
- d. Long Term Care

Manitoba Health, Seniors and Active Living will be sending a notice out to the regions shortly regarding the appropriate way to document immunizations in Panorama.

Train the Trainer refresher

The Panorama Support Team is planning to provide a WebEx facilitated session for current and future trainers. We hope to offer this session before the end of the year. If you have any suggestions for the agenda or would like to help with the planning and execution of this refresher, please contact Arielle (agoldmansmith@manitoba-ehealth.ca), Jacquie (JSarna@manitoba-ehealth.ca), or Ruth (RDeane@wrha.mb.ca). Please share lessons learned with us, so we can share with all.

Inventory updates

- a. QRC 4.10 Adverse Storage Conditions has been updated to include what to do if Naloxone kits have experienced adverse storage conditions. It has also been updated with instructions on how to document product that has previously been exposed to an adverse storage condition.
- b. There are two Engerix B products in Panorama, please order catalogue item 1715109 HB Adult 1.0 ml vial-1/box (Global Export Pack) first.
- c. Please do not add diluent to requisitions in Panorama. Diluents are added automatically to an order.
- d. Reminder to return expired vaccines as per QRC 4.9. Currently there are 289 rows of expired product in Operational Holding Point Locations across the province. Timing your monthly inventory count (QRC 4.8) to occur immediately after returning expired vaccines will keep your holding point location inventory current, will reduce the possibility of a client being immunized with expired product, and will negate the need perform a separate quantity on hand adjustment for the return.

New name for Panorama

It is not customary to adopt the vendor's product name with a local application. Panorama has been used in different ways in Canada, and is now being used in international locations. We would like to distinguish our implementation in Manitoba, as needs and benefits in Manitoba are as much related to how we have implemented the system, as opposed to the software itself. Please submit new name suggestions to Kathy Koschik (KKOSCHIK@manitoba-ehealth.ca) before the end of December. We would like to 'unveil' the new name in 2018.

Panorama User Group

The Panorama user group meets quarterly and is a forum for users to share successes, problem solve issues and propose changes to Panorama related workflows or functions. Each region has a representative on the Panorama User group. If you would like to participate or have something that you would like brought forward to the group, please contact your current peer supporter or trainer to discuss.

Investigations documentation in Panorama

September 1, 2017 was the 'go live' date for entering data into the investigations module in Panorama. Manitoba Health Surveillance Unit staff has started entering gonorrhea, chlamydia and syphilis laboratory reports and investigation forms. Many thanks to Lexie, Luiz, Iris, Gabriella, Marietta, Leanna and Colleen for all of your hard work. You will now notice that there is a tile on the Panorama website that contains QRCs for Investigations.

Communications Log

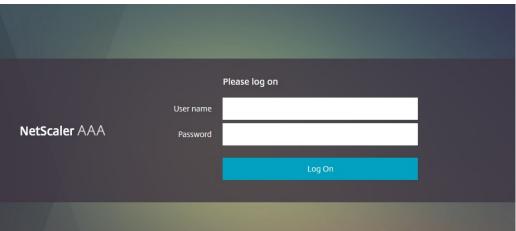

The communications log functionality has been implemented to support secure and timely after hours communication between Medical Officers of Health. You will also notice that they now have their own tile on the Panorama website that contains a QRC for this functionality.

Client Upload

Just a reminder to always check your client upload file and reconcile any obviously incorrect PHIN numbers prior to upload. This is important to avoid creating unwanted duplicate client records. Please also try to correct any incorrect PHIN numbers prior to 're-uploading'.

New log in

Panorama will have a new look for the log in screen. Soon it will appear like this:
