Immunizing Agent Drop Down List

The immunizing agents presented in the drop down list in Panorama include every vaccine ever provided in Manitoba. This means it includes both current and “retired” vaccines as client records in Panorama contain many of these “retired” vaccines.

Common Mistakes

Some users are incorrectly selecting “retired” immunizing agents for current immunizations. The most common errors identified to date are presented in the table below.

	Incorrect Immunizing Agent (Retired)	Correct Immunizing Agent (Current)
Panorama Drop Down Name	DPTP	<input checked="" type="checkbox"/> DTaP-IPV
Antigens	DPTP diphtheria + pertussis + tetanus + poliomyelitis pediatric	DTaP-IPV diphtheria + tetanus + acellular pertussis + inactivated poliomyelitis pediatric
Panorama Drop Down Name	DPTP-Hib	<input checked="" type="checkbox"/> DTaP-IPV-Hib
Antigens	DPTP-Hib diphtheria + pertussis + tetanus + poliomyelitis pediatric + Haemophilus influenza type b pediatric	DTaP-IPV-Hib diphtheria + tetanus + acellular pertussis + inactivated poliomyelitis + Haemophilus influenza type b pediatric

Users are requested to choose the correct and current Immunizing agent from the drop down list when they are documenting immunizations.

Guide to Immunizing Agents

The **Guide to Immunization Agents** can be found on the Panorama website in Training and Support Tools (at the link below) under the heading “Tip Sheets”.

Internet Browsers and Panorama

Panorama works differently in different internet browsers.

Some organizations are upgrading to IE11 which does not work well with Panorama and is not supported by IBM. The recommended internet options for Panorama are:

- IE8, IE9
- IE10 in compatibility mode
- or an alternate browser such as Firefox

Please work with your site's IT support people if browser support is needed.
