**Subject** Pneumococcal vaccination forecaster

---

Please be advised that updates to pneumococcal vaccination forecaster are now active in PHIMS. These changes align with provincial guidelines recommending the Pneu-C-15 vaccine for children under 5 years of age and the Pneu-C-20 vaccine for adults aged 65 and older.

It has been identified that, in some cases, the system may incorrectly recommend a 4th dose of Pneu-C-15 for children aged 2 to 5 who have already completed the recommended 3-dose schedule before age 2. The issue has been identified and should be resolved by September 12, 2024

The updated version of the user guide will be available on [phimsmb.ca](http://phimsmb.ca) on September 12, 2024.
